NOTE:

I urge the FDA to follow Europe's lead and ban animal uses of growth-promoting antibiotics used in human medicine. Improved hygiene, including better ventilation and deep straw bedding can take the place of antibiotics and keep these medicines available for the human population. The overuse of antibiotics with livestock has been linked to the emergence of antibiotic-resistant diseases; this must stop.

Please let me know your stand on this issue.

Best,

Carolyn Chambers Clark, RN, ARNP, EdD, FAAN, HNC
